

SuperAnnie I

Chest Tube Insertion Simulator

The insertion of chest tubes is a significant cause of iatrogenic injury. This simulator provides a safe, affordable and reproducible patient free training system for teaching and credentialing medical and nursing staff.

This simple trainer has a realistic ribcage and a pad positioned in each lateral chest wall. Each pad has multiple layers representing skin, subcutaneous fat, fascia, muscle and pleura. This facilitates insertion of large intercostal catheters and smaller pigtail catheters.

Each pad is compatible with the whole insertion procedure from prepping the skin and infiltrating with local anaesthetic to suturing the tube in place and applying the dressing.

An optimal subcutaneous tunnelling skin can be used which has two windows on each side of the skin that each accept larger Tunnelling Pads. The two windows permit practice of insertion of a pigtail catheter and then tunnelling it subcutaneously.

Pricing:

SuperAnnie 1	\$ 1,600
